Project Logistics Technology

GLOBAL TRANSTRACK is a specialized system to track purchase orders on supplier packed cargo.

Tracing ability from P.O. entry to system, call forward date, ETD, ATD, ETA, ATA, clearance date and delivery to site.

TRANSTRACK incorporating MEPAW packing and warehousing software, is available when our export packing services are used.

Internet access by client to establish cargo status

Reports tailored to individual client requirements

Customer Challenge: Implement an automated Purchasing, Distribution, Management and Transportation system while providing full web visibility & reporting by PO line item for over 3000 products, each with multiple packaging presentations and with monthly pricing variations (determined by prevailing base oil prices). Scope of Work included management between field purchasers and supply points located throughout North, Central, & South America, & Europe for delivery of product throughout Latin America.

The CMA-Agility Solution:

- Central coordination of all purchasing, expediting, and documentation activities.
- Database to provide pricing based on all package presentations for each product.
- Established EDI messaging between all parties
- Management of pricing variances determined by load date of product.
- Design automated documentation process for origin and destination country needs.
- Commercial documents prepared for payment of product.
- Provided automated messaging/alerts to all parties based on the achievement of milestones
- Provided performance based statistical analysis for all parties related to the transaction
- Complete web visibility from receipt of the requisition to delivery at destination.
- Full web based report functionality.

Our results: Cost effective, efficient Management, Distribution & Transportation system that Chevron recently proclaimed the Agility process/systems to be the new model for the management and movement of all Chevron lubricant products globally.
